CadCam

BRINGING 3 DECADES OF EXCELLENCE & PRECISION INTO OUR CAD/CAM PRODUCTS AND DIGITAL LIBRARIES.

Alpha-Bio Tec introduces a comprehensive range of CAD/CAM restoration products for Internal Hex and Conical platforms. All products feature original Alpha-bio Tec connections with the exact tolerances, ensuring best reliable implant to restoration fit, and offer solutions for single tooth and bridge restorations.

Dual Use Scan Bodies (for lab and/or intra-oral use)

Unique geometry for precise transfer of implant position, trajectory and orientation to the CAD system. Peek body and titanium base for accurate, long lasting use. The scan bodies are biocompatible and autoclavable.

Titanium Bases

Used as abutment bases for digital restorations with Alpha-Bio Tec original implant connection. Parts available in a range of gingival heights.

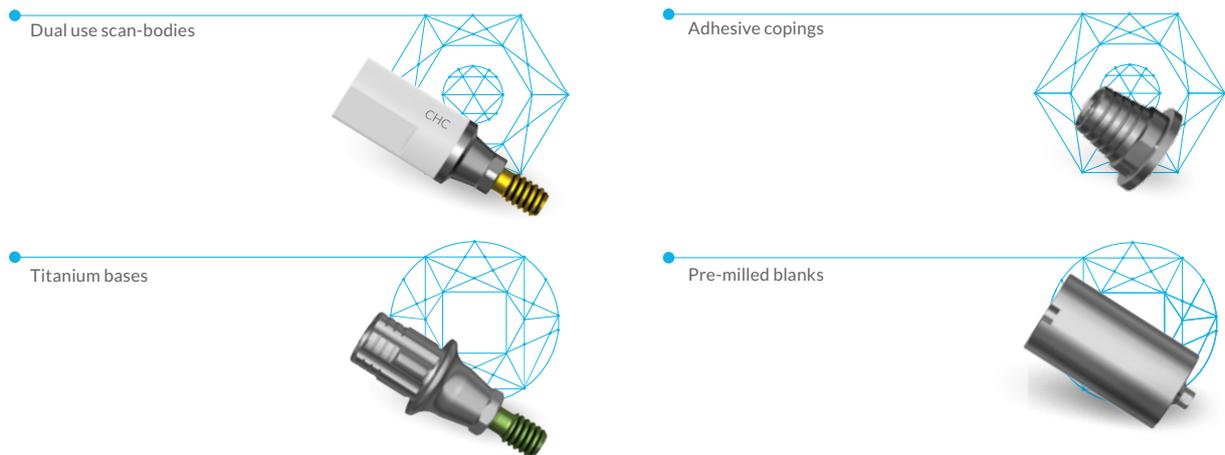

Adhesive Copings

Adhesive copings are used as adapters for screw retained zirconium restorations at abutment level - multi-unit angled and straight abutments (TCT-N connection). Zirconia restorations may not withstand the screw forces, thus for cases where there is no plan for a metal frame, the adhesive coping is indicated. A direct mounting screw is available for restorations without adhesive copings.

Pre-milled Blanks Are used as raw material for CAM fabrication of a single part (monolithic) titanium abutment. Original pre-milled implant connection is fabricated with the exact tolerances, ensuring best reliable implant to restoration fit. Fits Medentika's® Preface abutment holder.

CAD/CAM Libraries Software libraries contain all relevant Cad/Cam parts - Scan Bodies, Ti-Bases, Adhesive Copings, Screws, Analogs and Pre-Milled Blanks. Alpha-Bio Tec. Libraries enable simple and easy designing and manufacturing of your restorations for support all Alpha-Bio Tec. implant platforms. All products are available and supported by leading CAD/CAM systems.
